Eurostat – Unit F.5: Education, health, social protection

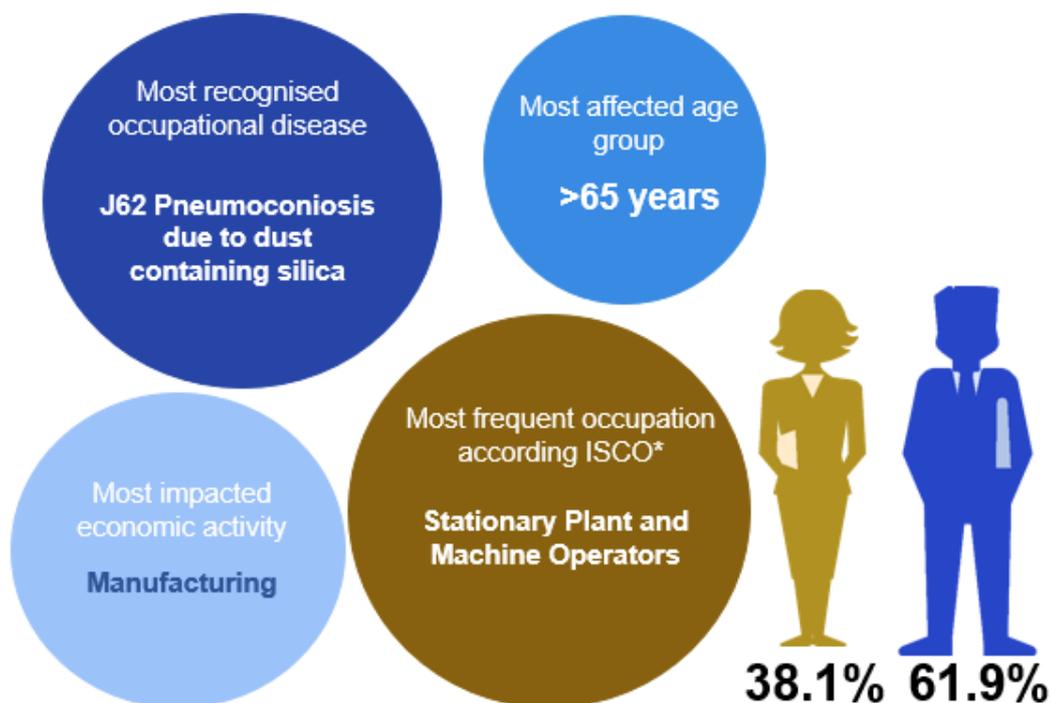

European occupational diseases statistics (EODS) – experimental statistics – Country profile: **Hungary**

Introduction

European occupational diseases statistics (EODS) are essential elements for the European Commission's strategy to assess the efficiency of Community legislation on health and safety at work. At present, EODS are experimental statistics. Beyond their occurrence, these statistics reflect the way in which the concept of occupational disease is integrated into the national social security or health systems.

This country profile is based on the EODS short list of occupational diseases. It presents information about the occupational diseases at national level (as aggregated data for the signalled period).

Definition

An occupational disease is an acute or chronic disease which occurs during or after the exercise of an occupation and which is due to physical, chemical, biological, psychosocial, or ergonomic pathological factors that occur during work, or as a result of over- or underload of the worker.
